

WHAT LAMP TO CHOOSE TO DO A GOOD PHOSPHENE?

The best lamp to practice Phosphenism is the kind of lamp used by architects.

Why?

Because, there is a reflector which allows to increase the size of the phosphene.

Incandescent, opaline

Safety and phosphene with a circular form.

GOOD BULBS examples:

- OSRAM NAED 11657 (75W-118V)
- PHILIPS 100A/W/LL 120V
- DURA MAX 100W 1440 LUMENS

For all countries US, Canada etc. in 110v

If you have this kind of mark on your bulb, you can erase it with a cloth soaked in acetone.

DO NOT USE

Hallogen

Danger due to heat if it is too close to the eyes.

Incandescent, transparent

Safety but phosphene without a circular form.

Compact fluorescent

Danger due to mercury gas if it breaks.

LED (Light Emitting Diode)

Danger due to electromagnetic field.

Neon
